- In the Claims. The following listing of claims will replace all prior versions of 1. the claims in the application:
- (Currently Amended) A placement indicator for use with a climbing cam 1. having opposed cam members, comprising:

visible placement indicia placed on each of said opposed cam members, wherein said visible placement indicia correlates to the quality of cam placement in a rock.

- 2. (Canceled)
- (Currently Amended) The placement indicator according to claim 1 [[2]] 3. wherein each cam defines a rock-contacting surface and a side surface, and wherein the visible indicia are placed on the side surface.
- (Original) The placement indicator according to claim 3 wherein the visible 4. indicia further comprises a color-coded marking in which the color of the indicia correlates to the quality of cam placement in the rock.
- (Original) The placement indicator according to claim 3 wherein the visible 5. indicia further comprises a graduated scale marking in which the scale graduations of the indicia correlate to the quality of cam placement in the rock.
- (Original) The placement indicator according to claim 3 wherein the visible 6. indicia further comprises a color-coded and graduated scale marking in which the markings correlate to the quality of cam placement in the rock.
- (Original) The placement indicator according to claim 4 wherein the color-7. coded markings further comprise a red zone, and yellow zone and a green zone.
- (Original) The placement indicator according to claim 7 wherein each colored zone correlates to a predetermined portion of the rock-contacting surface.
- (Original) In a climbing cam having at least one pair of opposing arcuate cam 9. members configured for contacting rock surfaces in a crack in a rock, the improvement comprising:

indicia on each of said carn members capable of indicating carn placement quality.

(Original) The climbing cam according to claim 9 wherein the opposing 10. arcuate cam members are pivotally movable between a fully open position in which

Attorney's Reference Number: 1192-012/ddh

the cam members contact rock surfaces and a fully closed position in which the cam members contact rock surfaces, and wherein the indicia on each of said cam members defines a graduated placement quality scale extending from the fully open position to the fully closed position.

- 11. (Original) The climbing cam according to claim 9 wherein the indicia further comprises color-coded indicia in which the color of the indicia correlates to the quality of cam placement in the crack.
- 12. (Original) The climbing cam according to claim 11 wherein the color-coded markings further comprise a red zone, and yellow zone and a green zone.
- 13. (Original) The climbing cam according to claim 12 wherein each colored zone correlates to a predetermined portion of a rock-contacting surface of the cam members.
- 14. (Original) A visual placement indicator for a climbing cam of the type having opposed cams, comprising:

indicia means on said cams for providing a visual assessment of the quality of cam placement.

- 15. (Original) The visual placement indicator according to claim 14 wherein the indicia means further comprises color coding means for providing a visual indication of the quality of cam placement.
- 16. (Original) The visual placement indicator according to claim 14 wherein the indicia means further comprises a graduated scale for providing a visual indication of the quality of cam placement.
- 17. (Original) The visual placement indicator according to claim 14 wherein the indicia means further comprises a color-coded graduated scale for providing a visual indication of the quality of cam placement.
- 18. (Original) The visual placement indicator according to claim 15 in which the color coding means comprises plural color coded zones including a red zone, a yellow zone and a green zone.
- 19. (Original) The visual placement indicator according to claim 18 in which each cam defines a rock-contacting surface, and wherein each colored zone correlates to a predetermined portion of the rock-contacting surface.

Attorney's Reference Number: 1192-012/ddh

20. (Original) The visual placement indicator according to claim 19 wherein each cam further defines a cam side surface and wherein the colored zones are marked on the cam side surface.
